

Project Initialization and Planning Phase

Date	04 July 2026
Team ID	
Project Name	Rising Waters – Flood Prediction System
Maximum Marks	3 Marks

Define Problem Statements (Customer Problem Statement Template):

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A resident of a flood-prone district	check whether current weather conditions could lead to flooding	there is no simple tool to get an instant read on flood risk	official flood bulletins are updated infrequently and are not localized	anxious and unprepared
PS-2	A local disaster-management volunteer	decide where to focus early-warning efforts	manual monitoring of rainfall data across regions is slow and inconsistent	there is no lightweight prediction tool to triage risk quickly	overwhelmed during monsoon season
PS-3	A student building a portfolio ML project	demonstrate an end-to-end ML deployment	most tutorials stop at the notebook and never reach a real usable interface	there was no reference implementation combining a trained model with a clean web app	motivated to build one from scratch
