Maximum Marks	4 Marks

Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses.

EMPATHY MAP — Rising Waters (Flood Prediction System)

SAYS	THINKS
• "Is it going to flood in my area this week?" • "I wish there was a quick way to check this myself." • "The official warnings always come too late."	• Will heavy rainfall this month put my home at risk? • I don't trust a single rainfall number - I want to see the bigger picture. • A visual result would be easier to understand than raw numbers.

PERSONA
Name: Ramesh Role / User Type: Resident of a rainfall-prone district, checks conditions during monsoon season before travelling or securing property

DOES	FEELS
• Enters temperature, humidity, cloud cover, and seasonal rainfall figures into the form • Checks the result page's risk gauge before making a decision • Switches to dark theme when checking the app at night during a storm	• Reassured when the app shows a low-risk result with clear visuals • Anxious but informed when a high-risk result appears, prompting early action • Confident using the tool since the interface is simple and requires no ML knowledge
