Customer Journey Map

Map out the customer's experience stage-by-stage, capturing their actions, touchpoints, thoughts, and feelings, along with process ownership and improvement opportunities at each stage.

Phase of Journey	Stage 1: Awareness	Stage 2: Input & Prediction	Stage 3: Decision
Actions <i>What does the customer do?</i>	- Hears about heavy rainfall in the news - Opens the Rising Waters web app - Browses the home page introduction	- Enters weather & rainfall readings into the form - Reviews values for accuracy - Clicks "Predict"	- Reads the animated risk gauge result - Interprets chance vs. no-chance - Decides whether to take precautions
Touchpoint <i>What part of the service do they interact with?</i>	Home page hero banner and introductory copy	Prediction form (10 input fields) with inline validation	Result page (chance.html / no_chance.html)
Customer Thought <i>What is the customer thinking?</i>	- Is this tool reliable? - How current is the underlying data?	- Am I entering the right values? - What units does each field expect?	- Should I act on this now? - Who should I share this result with?
Customer Feeling <i>What is the customer feeling?</i>	- Curious, slightly worried - Hopeful for a fast, clear answer	- Focused, mildly uncertain about units - A little impatient waiting for the result	- Relieved (low risk) or alert (high risk) - Motivated to act early if warned

Process Ownership <i>Who is in the lead on this?</i>	Product / UX team — owns home page copy & framing	Backend team — owns Flask routes & form validation	ML / data team owns model accuracy & result templates
Opportunities <i>How can we improve this stage?</i>	• Add a plain-language explainer of what the model uses • Add sample screenshots to build trust	• Add inline unit hints and example values for each field • Add a progress indicator on submit	• Add a short explanation of why the result came out that way • Add a "share result" button
